Low-Dose Tamoxifen for Radiation-Induced Breast Cancer Risk Reduction

**Why is this study being done?**

The purpose of this study is to see whether a low-dose of a drug called tamoxifen can reduce the risk of breast cancer for women who have a history of childhood cancer.

**Who can participate in this study?**

You may participate in this study if you:

- Are a woman over the age of 25 years
- You had a childhood, adolescent, or young adult cancer
- You do not currently have cancer
- You received radiation to your chest as part of your original cancer treatment

**What is involved?**

Participation involves:

- Taking tamoxifen or placebo for two years
- Mammograms
- Blood draws and urine collection

**How long is the study?**

This is a two-year study.

**How can I get more information?**
