How drug is given: by vein (IV)

Purpose: To treat ovarian cancer, breast cancer, gynecologic cancer, lung cancer, head and neck cancer, and other cancers

Things that may occur during or within hours after each treatment

1. Facial flushing (warmth or redness of the face), itching, or a skin rash could occur. These symptoms are due to an allergic response and should be reported to your doctor or nurse right away.

2. You may have nausea, vomiting, loss of appetite and/or stomach pain. Nausea and vomiting may begin soon after the drug is given and may last more than 24 hours. Drugs to help with this will be given to you.

Things that may occur a few days to weeks later

1. Your blood cell counts may drop. This is known as bone marrow suppression. This includes a decrease in your:
   - Red blood cells, which carry oxygen in your body to help give you energy
   - White blood cells, which fight infection in your body
   - Platelets, which help clot the blood to stop bleeding

   This may happen 7 to 14 days after the drug is given and then blood counts should return to normal. If you have a fever of 100.5°F (38°C) or higher, chills, a cough, or any bleeding problems, tell your doctor or nurse right away.

2. Some or all of your hair may fall out around 3 to 4 weeks after treatment starts. You may lose hair on your head as well as facial and body hair. You may want to buy a wig before hair loss begins. Hair may grow back during treatment.

3. You may lose some feeling, or have tingling or burning in your hands and/or feet. This may increase with continued treatment. This may get better over time when drug is stopped.
Things that may occur after treatment ends (even months to years later)

- Fertility and Related Precautions:
  - It is very important to use birth control if you are having sex, because this drug could be harmful to an unborn baby.
  - Men may become sterile and may want to think about sperm banking prior to chemotherapy.
  - For women, your period (menstrual cycle) may not be regular for a while or may stop completely and you may not be able to get pregnant.
  - Women should not breast-feed while receiving this drug.
  - If you are concerned about any of this, please talk with your doctor or nurse.

The above information includes some, but not necessarily all, of the possible side effects of this medication. The side effects in this teaching sheet may not be the same ones you experience. Your side effects may be different, depending on how often you receive treatment (your schedule) and how much you receive each time (your dosage). Side effects may also vary if you take other medications. Please talk with your doctor or nurse if you have questions about possible side effects you may experience. This document should not take the place of conversations with members of your health care team.

If you experience any significant change in your health during or after treatment, contact a member of your health care team right away.
