How drug is given: by vein (IV)

**Purpose:** Treatment of lymphomas, certain blood disorders, testicular cancer, choriocarcinoma, breast cancer, bladder cancer, renal cell cancer, and other cancers

**Things that may occur during or within hours of treatment**

1. Vinblastine, as with many drugs, may cause an allergic reaction. If you have a rash, facial flushing (warmth or redness of the face), or itching during or after you get this drug, please **tell your doctor or nurse right away.**

2. Mild to moderate nausea, vomiting, and loss of appetite may occur. Drugs to help with this may be given to you.

3. If the drug leaks out of the vein into the tissue while it is being given, it can cause harm. This is called extravasation. If you feel any burning or tingling in the area of your IV, please **tell your nurse right away.**

   **Swelling, redness, blisters or bruising around the area of the IV or port may occur** one or two weeks after getting this drug. **Call your doctor or nurse immediately if you experience any of these symptoms.**

**Things that may occur a few days to weeks later**

1. Your blood cell counts may drop. This is known as bone marrow suppression. This includes a decrease in your:
   - Red blood cells, which carry oxygen in your body to help give you energy
   - White blood cells, which fight infection in your body
   - Platelets, which help clot the blood to stop bleeding

   This may happen 7 to 14 days after the drug is given and then blood counts should return to normal. If you have a **fever of 100.5°F (39°C) or higher,** chills, a cough, or any bleeding problems, **tell your doctor or nurse right away.**

2. Mild constipation may occur after treatment begins. Please increase your fluid intake and increase fiber in your diet by eating fresh fruits and vegetables. A daily stool softener, such as
3. Some or all of your hair may fall out around 3 to 4 weeks after treatment starts. You may lose hair on your head as well as facial and body hair. You may want to buy a wig before hair loss begins. Hair may grow back during treatment.

4. You may lose some feeling, or have tingling or burning in your hands and/or feet. This is called peripheral neuropathy. This may increase with continued treatment. Please tell your doctor or nurse if you have trouble buttoning your clothes or have trouble walking. Peripheral neuropathy should get better over time when the drug is stopped.

5. Your skin may be more sensitive in the sun. Use a sunscreen of SPF 30 or greater when you go outside. Do not go to tanning booths.

**Things that may occur after treatment ends (even months to years later)**

- **Fertility:**
  - It is still very important to use birth control if you are having sex, because this drug could harm an unborn baby.
  - Men may become sterile and may want to think about sperm banking prior to chemotherapy.
  - For women, your period (menstrual cycle) may not be regular for a while or may stop completely and you may not be able to get pregnant.
  - If you are concerned about any of this, please talk with your doctor or nurse.

*The above information includes some, but not necessarily all, of the possible side effects of this medication. The side effects in this teaching sheet may not be the same ones you experience. Your side effects may be different, depending on how often you receive treatment (your schedule) and how much you receive each time (your dosage). Side effects may also vary if you take other medications. Please talk with your doctor or nurse if you have questions about possible side effects you may experience. This document should not take the place of conversations with members of your health care team.*

*If you experience any significant change in your health during or after treatment, contact a member of your health care team right away.*
