Abiraterone Acetate (Zytiga®)
(“a-bir-A-ter-one   AS-e-tate”)

How drug is given: By mouth

Purpose: To stop the growth of cancer cells in prostate cancer

How to take this drug

1. Take this medication on an empty stomach (at least 1 hour before or 2 hours after food).

2. Swallow tablets whole with a full glass of water, do not crush or chew tablets.

3. If you miss a dose, take it as soon as possible. However, if it is almost time for your next dose, skip the missed dose and go back to your regular dosing schedule. Do not double dose.

4. Abiraterone can interfere with many drugs, which may change how this works in your body. Talk with your doctor before starting any new medication or supplement, including over-the-counter drugs, natural products, herbal supplements, and vitamins.

5. Wash hands after taking the medication. Avoid handling crushed or broken tablets.

Storage and disposal

• Store at room temperature, away from heat and moisture.

• Keep this medicine in its original container, out of reach of children and pets.

• If you have unused oral chemotherapy pills (tablets or capsules), please return them to the pharmacy where the prescription was filled. Do not flush them down the toilet, dump in the sink, or throw away in the trash.

Things that may occur during treatment

1. Your body may not be able to get rid of extra fluid. This is called edema. You may notice some swelling in your arms or legs.
2. Loose stools or diarrhea may occur after the drug is given. You may take loperamide (Imodium A-D®) to help control diarrhea. You may buy this at most drug stores. It is also important to drink more fluids (water, juice, sports drinks). If these do not help, tell your cancer care team.

3. You may feel pain or weakness in your joints or muscles. If these bother you, ask your cancer care team what type of drugs you may use to help with this pain.

4. This drug may cause a change in your blood sugar and/or cholesterol levels. Normal levels usually return after treatment is stopped.

5. Mild constipation may occur after treatment begins. Please increase your fluid intake and increase fiber in your diet by eating fresh fruits and vegetables. A daily stool softener, such as docusate (Colace®) and/or laxatives such as senna (Senakot®), may be helpful. If these do not help within 48 hours, tell your doctor or nurse. Do not use bulk forming laxatives such as Metamucil® without first talking with your doctor or nurse.

6. Your blood pressure may go up. If this happens, you may be given medication to help with this. If you have headaches or dizziness, tell your doctor or nurse right away.

7. Your liver may be affected by this medicine. On occasion, blood work will be taken to monitor your liver function.

8. You may experience hot flushes or warmth/redness that comes on suddenly.

9. Some patients may feel very tired, also known as fatigue. You may need to rest or take naps more often. Mild to moderate exercise can also help you maintain your energy.

10. This medicine may reduce the number of healthy red blood cells in your body. This can lead to anemia. Symptoms can begin with tiredness and progress to severe dizziness and shortness of breath. Call your cancer team right away if you have shortness of breath, a fast heartbeat, dizziness, or confusion.

11. Some important minerals called electrolytes are found in your blood and body fluids. They can be affected by this medicine. Your cancer care team will check your blood work periodically to monitor your potassium, magnesium and sodium levels.

**Things that may occur after treatment ends (even months to years later)**

**Fertility and Related Precautions:**
- It is very important to use birth control if you are having sex, because this drug can be harmful to an unborn baby. Avoid pregnancy during treatment and for at least 1 week after the treatment has been stopped.
- Women should not breastfeed while receiving this drug.
- If you are concerned about any of this, please talk with your cancer care team.
The above information includes some, but not necessarily all, of the possible side effects of this medication. The side effects in this teaching sheet may not be the same ones you experience. Your side effects may be different, depending on how often you receive treatment (your schedule) and how much you receive each time (your dosage). Side effects may also vary if you take other medications. Please talk with your cancer care team if you have questions about possible side effects you may experience. This document should not take the place of conversations with members of your cancer care team.

If you experience any significant change in your health during or after treatment, contact a member of your cancer care team right away.

Managing your oral chemotherapy schedule at home can be challenging. To help you with this, consider using tools to help you keep track of your schedule and any side effects you may have. You can find these tools online at [www.dana-farber.org/OralChemoDiary](http://www.dana-farber.org/OralChemoDiary).

Oral chemotherapy medicines are given by mouth in the form of capsules, tablets, or liquid. These safety tips will help you understand what to do when you are taking oral chemotherapy.

Please note: If you are on a clinical trial, you may be given special instructions.

How to take this drug

- Swallow each tablet or capsule whole. Do not break, crush, or chew.

- Prepare your drug away from food and food prep areas.

- If you miss a dose, take it as soon as possible. However, if it is almost time for your next dose, skip the missed dose and go back to your regular dosing schedule.

- Do not double the dose.

- If you are on a clinical trial, you will be given special instructions if you miss a dose.

- If you are unable to swallow the pill, speak with your nurse or pharmacist about other ways to take your medication.

- If you vomit or throw up your medication, call your physician for further instructions.

- Wash your hands after taking the medication. Avoid handling crushed or broken pills (tablets or capsules).

Storage

- Most oral chemotherapy medicine is stored at room temperature, away from excess heat and moisture. You will be told if the medication you are taking needs special storage or handling.

- Keep this medicine in its original container, in a safe place, away from other family medications. All medications need to be kept out of the reach of children and pets.
Disposal

- If you have unused oral chemotherapy pills (tablets or capsules), please return them to the pharmacy where the prescription was filled. Do not flush down the toilet, dump in the sink, or throw away in the trash.

Safe handling of body waste in the home after chemotherapy

- Chemotherapy stays in the body for hours or even days, and is found in vomit, urine, stool, and sweat (body wastes). Special care must be taken to prevent the patient's body waste from coming into accidental contact with the patient or caregiver.

Body wastes

Patient and caregiver:

- You can use the toilet (septic tank or city sewage) as usual. There is no research to support double flushing to prevent accidental contact (although this may be suggested for certain medications). Ask your doctor or nurse what they suggest for your medication.

- Wash your hands well with soap and water after using the toilet. If urine, vomit, or stool gets on your body, wash with soap and water. Always wear gloves when cleaning equipment or disposing waste from a urinal or commode.

- Pregnant caregivers should not handle patient body waste.

- It is safe for family and friends to use the same toilet, as long as all body waste is cleaned from the toilet.

- To absorb urine or stool, use a disposable, plastic-backed pad, diaper, or sheet. Change it immediately when soiled. Then wash skin with soap and water.

- If you have an ostomy, you or your caregiver may want to wear gloves when emptying or changing appliances.

Laundry

- Always wear disposable gloves when handling sheets or clothes that have been soiled with body waste.

- Soiled items should be kept and washed separately from the other laundry.

Oral chemotherapy is a serious drug that requires extra caution. If you have questions or concerns about your oral chemotherapy, do not hesitate to call your clinician.
