Everolimus (Afinitor®)
(“e-ver-OH-li-mus”)

How drug is given: By mouth

Purpose: to slow the growth of cancer cells in kidney cancer and other cancers

How to take the drug

- Take with or without food and with a full glass of water. Take it the same way every time.

- Swallow each tablet whole; do not chew or crush the tablets. If you are unable to swallow, the pharmacist will give you specific instructions.

- If you miss a dose, take it as soon as possible. However, if it is almost time for your next dose, skip the missed dose and go back to your regular dosing schedule. Do not double dose.

- Everolimus can interfere with many drugs, which may change how this works in your body. Talk with your doctor before starting any new drugs, including over-the-counter drugs, natural products, herbal supplements, and vitamins.

- Do not drink grapefruit juice or eat grapefruit. Also, do not take St. John’s Wort. Consuming these may increase the amount of medication in your body and worsen side effects.

Storage

- Store at room temperature, away from heat and moisture.

- Keep this medicine in its original container, out of reach of children and pets.

- If you have unused oral chemotherapy pills, please return them to the pharmacy where the prescription was filled. Do not flush them down the toilet, dump in the sink, or throw away in the trash.

Things that may occur a few days to weeks later

1. Mild to moderate nausea, vomiting, and loss of appetite may occur. You may be given medicine to help with this.
2. Your blood cell counts may drop. This is known as bone marrow suppression. This includes a
decrease in your:
- Red blood cells, which carry oxygen in your body to help give you energy
- Platelets, which help clot the blood to stop bleeding
- White blood cells, which fight infection in your body

If you have a **fever of 100.5°F (38°C) or higher**, chills, a cough, or any bleeding problems,
call your cancer care team right away.

**OR**
If you have an **ongoing fever of 100.5 F (38C) or higher**, make sure you are drinking plenty
of fluids. If you become dizzy or lightheaded, call your cancer care team right away.

3. Skin changes may occur, such as redness or a rash (sometimes looks like acne). This will most
likely appear on your face, chest, or back. It may be itchy, inflamed, and could become infected.
If any skin changes occur, please talk with your doctor or nurse. There are drugs that can help
with skin changes. Stay out of the sun and do not use over-the-counter acne products.

4. If you develop a new or worsening cough or shortness of breath, tell your cancer care team.

5. Loose stools or diarrhea may occur within a few days after the drug is started. You may take
loperamide (Imodium A-D®) to help control diarrhea. You can buy this at most drug stores. Be
sure to also drink more fluids (water, juice, sports drinks). If these do not help within 24 hours,
call your cancer care team.

6. This drug may cause a change in your blood sugar and/or cholesterol levels. Normal levels
usually return after treatment is stopped.

7. Your liver may be affected by this medicine. On occasion, blood work will be taken to monitor
your liver function.

8. You may get a headache. Please talk to your cancer care team about what you can take for this.

9. Wounds may heal more slowly than normal. If you notice changes in any surgical wounds,
please talk with your cancer care team.

10. You may feel pain or weakness in your joints or muscles. If these bother you, ask your cancer
care team what type of drugs you may use to help with this pain.

11. Some patients may feel very tired, also known as fatigue. You may need to rest or take naps
more often. Mild to moderate exercise can also help you maintain your energy.

12. You may get mouth pain. You may have a burning feeling and redness inside the mouth or on
the lips. Mouth rinses may be ordered by your doctor. Check with your doctor before having any
dental work done.
13. Your body may not be able to get rid of extra fluid. This is called edema. You may notice some swelling in your arms or legs.

14. Your kidneys could be hurt by this drug and not work as well. Your kidneys will be watched closely with blood and urine tests.

15. Some important minerals called electrolytes are found in your blood and body fluids. They can be affected by this medicine. Your cancer care team will check your blood work periodically to monitor your calcium, potassium and phosphate levels.

16. This drug may cause mood changes. Tell your cancer team if you feel more anxious and irritable.

Fertility and Related Precautions
- Fertility and Related Precautions:
  - It is very important to use birth control if you are having sex, because this drug could be harmful to an unborn baby.
  - Women should not breast-feed while receiving this drug.
  - If you are concerned about any of this, please talk with your cancer care team.

The above information includes some, but not necessarily all, of the possible side effects of this medication. The side effects listed in this teaching sheet may not be the same ones you experience. Your side effects may be different, depending on how often you receive treatment (your schedule) and how much you receive each time (your dosage). Side effects may also vary if you are taking other medications. Please speak with your cancer care team if you have questions about possible side effects you may experience. This document should not take the place of conversations with members of your cancer care team.

If you experience any significant change in your health during or after treatment, contact a member of your cancer care team right away.

Managing your oral chemotherapy schedule at home can be challenging. To help with this, consider using tools to help you keep track of your schedule and any side effects you may have. You can find these tools online at www.dana-farber.org/OralChemoDiary.

**THIS SPACE RESERVED FOR WRITTEN COMMENTS OR NOTES FOR THE PATIENT AND FAMILY:**
Oral chemotherapy medicines are given by mouth in the form of capsules, tablets, or liquid. These safety tips will help you understand what to do when you are taking oral chemotherapy.

Please note: If you are on a clinical trial, you may be given special instructions.

How to take this drug

- Swallow each tablet or capsule whole. Do not break, crush, or chew.
- Prepare your drug away from food and food prep areas.
- If you miss a dose, take it as soon as possible. However, if it is almost time for your next dose, skip the missed dose and go back to your regular dosing schedule.
- Do not double the dose.
- If you are on a clinical trial, you will be given special instructions if you miss a dose.
- If you are unable to swallow the pill, speak with your nurse or pharmacist about other ways to take your medication.
- If you vomit or throw up your medication, call your physician for further instructions.
- Wash your hands after taking the medication. Avoid handling crushed or broken pills (tablets or capsules).

Storage

- Most oral chemotherapy medicine is stored at room temperature, away from excess heat and moisture. You will be told if the medication you are taking needs special storage or handling.
- Keep this medicine in its original container, in a safe place, away from other family medications. All medications need to be kept out of the reach of children and pets.
Disposal

- If you have unused oral chemotherapy pills (tablets or capsules), please return them to the pharmacy where the prescription was filled. Do not flush down the toilet, dump in the sink, or throw away in the trash.

Safe handling of body waste in the home after chemotherapy

- Chemotherapy stays in the body for hours or even days, and is found in vomit, urine, stool, and sweat (body wastes). Special care must be taken to prevent the patient’s body waste from coming into accidental contact with the patient or caregiver.

Body wastes

Patient and caregiver:

- You can use the toilet (septic tank or city sewage) as usual. There is no research to support double flushing to prevent accidental contact (although this may be suggested for certain medications). Ask your doctor or nurse what they suggest for your medication.

- Wash your hands well with soap and water after using the toilet. If urine, vomit, or stool gets on your body, wash with soap and water. Always wear gloves when cleaning equipment or disposing waste from a urinal or commode.

- Pregnant caregivers should **not** handle patient body waste.

- It is safe for family and friends to use the same toilet, as long as all body waste is cleaned from the toilet.

- To absorb urine or stool, use a disposable, plastic-backed pad, diaper, or sheet. Change it immediately when soiled. Then wash skin with soap and water.

- If you have an ostomy, you or your caregiver may want to wear gloves when emptying or changing appliances.

Laundry

- Always wear disposable gloves when handling sheets or clothes that have been soiled with body waste.

- Soiled items should be kept and washed separately from the other laundry.

Oral chemotherapy is a serious drug that requires extra caution. If you have questions or concerns about your oral chemotherapy, do not hesitate to call your clinician.
